Nigeria 2025 Licensing Round

PPL 307

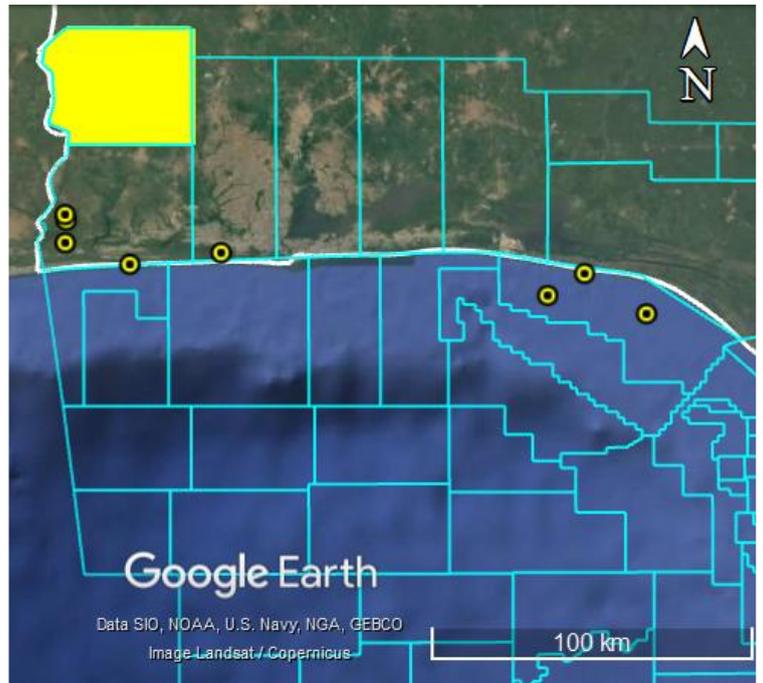

**NIGERIAN UPSTREAM
PETROLEUM REGULATORY
COMMISSION**

PPL-307 lies along Nigeria's western boundary with the Republic of Benin, extending across Ogun State. The block occupies a relatively frontier onshore area, with no well drilled in it. The block has some gravity data but no seismic data coverage across the block.

The area falls within the Transform Margin Basin situated in the Benin Basin in onshore Nigeria. Two major petroleum plays are recognized in the Nigerian Transform Margin: the syn-transform Lower Cretaceous and the post-transform Upper Cretaceous. Source rocks evolved from deeper Aptian lacustrine shales to shallower Mid-Albian marginal-marine shales as rifting progressed.

The Upper Cretaceous petroleum system is sourced primarily from Cenomanian–Turonian shales deposited under deep, anoxic marine conditions. Reservoir opportunities are provided by Albian to Santonian shallow- to deep-marine sandstones.
